

A glossary of mineralogy

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1861 Excerpt: ...or columnar masses. It feels remarkably smooth and does not stain the fingers. Slightly heavier than water. Burns with a greenish flame, and emits a very strong, sweetish bituminous smell, leaving a light yellowish-coloured ash. Localities. Jet is found principally in marly, schistose, or sandy beds in France; near Wittemberg in Prussia; in the amber mines on the coast of the Baltic, where it is known by the name of Black Amber; and in Alum shale in the neighbourhood of Whitby in Yorkshire, in hard and darkcoloured bituminous shale forming the lower part of the Upper Lias formation. Jet is made into various articles, and is especially used for mourning-ornaments. The value of the jet manufactured at Whitby in 1855, amounted to ?20,000. In France the departments of Aude, of the Var, the Pyrenees, of Ariege, and of Ardennes are celebrated for this production. In the last century 1200 men were employed in the department of the Aude alone, in carving and turning the Jet of that neighbourhood into beads, rosaries, buttons, bracelets, earrings, necklaces, snuff-boxes, drinking vessels, and into pieces cut in facets, for mourning ornaments. 1000 cwts. were yearly consumed for these purposes, but the trade has now greatly fallen off. Considerable quantities are still, however, exported to Turkey, Senegal, but chiefly to Spain, to which latter country Jameson states that manufactured Jet to the value of 18,000 livres was sold in 1805. This substance is the Gagates of the ancients, who gave it that name after the River Gaga, or the town of Gaxis in Lycia, where it was originally found. The modern JEWREINOWITE. words, Jayet, Jais, or Jet are doubtless

derived from the ancient name Gagates or Gagat. Artificial Jet is made of a kind of black glass, which is either ...
