

Japan 2011 Earthquake: U.S. Department of Defense (DOD) Response

With almost 40,000 U.S. troops stationed in Japan, the March 11, 2011, earthquake and tsunami is unique in that U.S. forces and associated resources were located in close proximity to deal with the crisis. All Services Army, Navy, Marine Corps, and Air Force are present in Japan in various capacities. In addition, U.S. forces train regularly with their Japanese Self Defense Force (SDF) counterparts, including many humanitarian assistance and disaster relief exercises. With over 100,000 SDF troops called up to respond to the disaster, U.S. forces were able to coordinate their efforts almost immediately to provide support for the Japanese responders. Within 8 days of the earthquake, the SDF had deployed 106,200 personnel, 200 rotary aircraft and 322 fixed-wings, and 60 ships. Nearly all of the Maritime SDF ships have been transferred to the affected area, and forces from the southernmost to the farthest north territories have been mobilized. As of March 19, the SDF had rescued 19,300 people and provided supplies on an ongoing basis to 300,00 displaced people, in addition to supporting activities at the troubled nuclear reactors. Operational Update On March 18, one week after the quake struck, U.S. and Japanese forces began to transition from a search and rescue effort to a relief mission for the survivors. DOD officials report that as of the morning of March 22, 20 U.S. naval ships, 140 aircraft, and 19,703 sailors and marines are now involved in humanitarian assistance and disaster relief efforts in and around Japan, delivering 227 tons of relief supplies to date. U.S. Army and Air Force units are also delivering humanitarian supplies and providing other services as required. All search and rescue assets from Okinawa, the southernmost part of Japan, were first moved to Yokota Air base outside of Tokyo and then deployed to the north. Further details are in the sections on each branch's operations below. On March

21, Admiral Robert Willard, commander of the U.S. Pacific Command, visited the Defense Ministry for consultations with SDF Chief of Staff Ryoichi Oriki and other officers, reinforcing the commitment to coordinate relief efforts. DOD Funding On March 12, Secretary of Defense Gates authorized U.S. Pacific Command (USPACOM) to continue disaster relief operations and approved \$35 million in Overseas Humanitarian, Disaster, and Civic Aid (OHDACA) funding for these purposes. As the scope and duration of DODs support becomes better defined, it is possible that additional funding will be required. Status of DOD Facilities and Personnel Initial DOD efforts after the earthquake were focused on what can be described as force protection such as relocating naval vessels and aircraft so that potential damage from the impending tsunami would be mitigated, as well as protecting and accounting for U.S. military personnel, 43,000 dependents, and 5,000 DOD civilian employees stationed in Japan. These force protection efforts appear to have been successful as there were no reported DOD-related fatalities and no reports of major damage to DOD facilities or equipment. Voluntary Departure of DOD Dependents After the State Department authorized the voluntary departure for family members and dependents of U.S. government personnel who wish to leave Northeast Japan on March 17, DOD stated that it would implement the State Departments plan for eligible DOD dependents. It was reported that Navy bases in the Tokyo area would begin voluntary evacuations for family members as early as the evening of March 17. The Navy reportedly has the capability to evacuate up to 10,000 people per day. On March 17, Admiral Robert Willard, Commander of the U.S. Pacific Command, stated that planning figures for an overall evacuation of U.S. citizens in the greater Tokyo area was about 87,300 personnel a figure that includes eligible DOD dependents.⁶ In the event of such a large-scale evacuation, DOD would likely

play a prominent role in planning [...]
