

# Arrangements, Local Systems and Singularities: CIMPA Summer School, Galatasaray University, Istanbul, 2007 (Progress in Mathematics, Vol. 283)

This volume comprises a set of lecture notes from the CIMPA Summer School, Arrangements and Local Systems and Singularities, held at Galatasaray University, Istanbul, during June 11-22, 2007. The school was attended by 68 mathematicians, 35 of them from 19 countries outside Turkey. The Summer School was made up of eleven short courses and 7 seminars presented by an outstanding group of lecturers who covered a wide range of topics related to the concepts of arrangements, local systems and singularities. The list of lectures of the workshop appears below. Most members of the audience were graduate students or young researchers and the primary purpose of the school was to introduce them, in particular those from developing countries, to the many advances and opportunities in this widely applicable field. Historically, research on arrangements of hyperplanes, starting with the work of V.I. Arnold and E. Brieskorn and later Peter Orlik, was presented at meetings devoted mainly to discussions of singularities. Some of the articles in this volume demonstrate that the interaction between these two subjects is ongoing and particularly productive. Beyond this, the volume is intended for a large audience in pure mathematics, including researchers and graduate students working in algebraic geometry, singularity theory, topology and related fields. The reader will find in the Problem Section at the end of the volume a variety of open problems proposed by the lecturers at the end of the School's sessions as directions ripe for further study and development.
